

1 Tengwar Formal Unicode: Graphite and AAT options

Here are samples of the different options. The options are specified by adding something to the font name in the `\font` command. The extended font names are all given in this document. A font specification will look like this:

```
\font\bla="font (/GR):feature=value (;feature=value) "
```

In this specification, the part `bla` is a string of your choice. The part `/GR` is optional. It tells XeTeX to use the Graphite information. If you leave it away, it will use the AAT information (though AAT may only work on Mac OS X). Note that you can define as many features as you like. Here is an example:

```
\font\myformal="Tengwar Formal Unicode/GR:204=1;207=2"
at 15pt
```

After this `\font` command has been defined, you can use `\myformal` as a command, for instance as follows:

```
\myformal ၵᄃᄆ ᄃᄆᄃᄆ \normalfont
```

This will look like this: ၵᄃᄆ ᄃᄆᄃᄆ

1.1 Descending W-tengwa

1.1.1 Default

```
"Tengwar Formal Unicode/GR"
  ၵᄃᄆ ᄃᄆᄃᄆ
"Tengwar Formal Unicode"
  ၵᄃᄆ ᄃᄆᄃᄆ
```

1.1.2 Descending W-tengwa

```
"Tengwar Formal Unicode/GR:204=1"
  ၵᄃᄆ ᄃᄆᄃᄆ
"Tengwar Formal Unicode:Character Alternatives=Descending
W-tengwa;"
  ၵᄃᄆ ᄃᄆᄃᄆ
```

1.2 Marked Osse

1.2.1 Default: Never
